Montaż

Przycinanie

Profile elewacyjne można przycinać do pożądaných długości za pomocą metalowej piłki. W celu wykonania możliwie najbardziej precyzyjnego cięcia (np. podczas docinania kątów), zaleca się używanie pił z prowadnicą. W celu uzyskania załamania narożnego, należy przyciąć profile pod kątem 45 stopni, a następnie skleić obydwie elementy klejem do styropianu.

Mocowanie

Aby przykleić profile do fasady, wystarczy użyć mineralnego kleju do styropianu. Należy pokryć klejem możliwie jak największą powierzchnię płaską profila. Dobrym rozwiązaniem są także piankowe kleje poliuretanowe.

Łączenia

Profile należy połączyć używając kleju do styropianu. Należy usunąć klej ze szczeliny powstałej między profilami do głębokości około 3mm. Następnie wypełnić spoinę specjalną otrzymaną od nas masą. Jej kolor i faktura są takie same jak masa, której używamy do powlekania naszych wyrobów.

Malowanie

Profile należy malować wodorozcieńczalnymi farbami elewacyjnymi.
